

in the battle for hard-surface disinfection, you'll need

# BROAD-SPECTRUM POWER

*with a Gentle side*

**A powerful disinfectant safe for sensitive equipment...**

**That's proteX™**

Healthcare facility disinfectants need to be aggressive agents against a broad spectrum of pathogens. Yet, many times over, that aggression extends beyond the realm of microorganisms and brutalizes sensitive equipment, often voiding warranties and rendering your costly investment useless.

That's where PROTEX Disinfectant Spray is different. PROTEX is an EPA approved, one-step spray that effectively kills a wide range of bacteria, viruses, and fungi including:

- MRSA
- HIV
- VRE
- HBV
- Coronavirus
- E-coli
- Salmonella
- HCV
- Norwalk Virus
- Herpes
- Influenza
- VISA

And since it's alcohol-free, PROTEX can be used on a variety of non-porous surfaces such as ultrasound transducers and probes, mammography compressor plates, other non-surgical surfaces.

*one step disinfection and sensitive equipment safety with proteX disinfectant spray.*

Visit [www.parkerlabs.com/protex](http://www.parkerlabs.com/protex) for a complete list of uses.

*Protex Disinfectant Spray is available in 12 oz. spray bottles and is currently available for sale only in USA and Puerto Rico.*
